

## TEMWA

- Temwa's mission is to **develop self-sufficient communities in Northern Malawi by supporting projects in education, health, agriculture and forestry, and microfinance.**
- Temwa's carbon-balancing programme is based on three strands of work: tree planting; sustainable agriculture and agroforestry; and support for local governance. By working with community structures and improving household livelihoods they work to ensure that trees stay in the ground and protect a flourishing, green landscape.
- 17 Farmer Associations and forest-friendly community enterprises are now providing income for rural people.

“ Having a partner like ecolbrium who is so engaged with the work that Temwa does is really special [...] Temwa Carbon Balance has planted 51,075 trees since it was first launched in early 2020, with 33,007 of those planted in 2021. Out of these trees, 17,696 have been planted thanks to Ecolibrium investment.
